

AVL2

```
- root : AVLNode*
- insert (Word*&, AVLNode*&): void
- makeEmpty (AVLNode*&): void
- print (ostream&, AVLNode*) const : void
- returnWord (string&, AVLNode*): Word*
```

```
+ AVL2()
+ AVL2 (const AVL2&)
+ ~AVL2()
+ getRoot(): AVLNode*
+ height (AVLNode*&): int
+ insert (Word*&): void
+ isEmpty() const : bool
+ makeEmpty(): void
+ returnWord (string&): Word*
+ rotateWithLeftChild (AVLNode*&): void
+ rotateWithRightChild (AVLNode*&): void
+ doubleWithLeftChild (AVLNode*&): void
+ doubleWithRightChild (AVLNode*&): void
+ print (ostream&) const : void
+ searchFor (string&, AVLNode*): bool
```

AVLNode

```
struct
    element : Word*
    height : int
AVLNode*
    left : AVLNode*
    right : AVLNode*
    AVLNode (Word*, AVLNode*, AVLNode*,
              int)
    ~AVLNode()
```

AVLTREE

```
- class AVLNode
- root : AVLNode*
- insert (T, AVLNode*): void
- insert2 (T, AVLNode*): void
- print4 (ostream&, AVLNode*): void
- print3 (ostream&, AVLNode*): void
- print2 (ostream&, AVLNode*): void
- print (ostream&, AVLNode*): void
- returnObject (int&, AVLNode*): T&
```

```
+ AVLTree()
+ find (const T&, AVLNode*): T&
+ returnObject (int&): T&
+ height (AVLNode*): int
+ insert (const T&): void
+ insert2 (const T&): void
+ isEmpty() const : bool
+ rotateWithLeftChild (AVLNode*): void
+ rotateWithRightChild (AVLNode*): void
+ doubleWithLeftChild (AVLNode*&): void
+ doubleWithRightChild (AVLNode*&): void
+ print4 (ostream&): void
+ print3 (ostream&): void
+ print2 (ostream&): void
+ print (ostream&): void
+ search (T&, AVLNode*): bool
+ ~AVLTree()
+ getRoot(): AVLNode*
```

Document Parser

- word AVL: AVL2
- table: HashTable
- pages: AVLTree <Page*>

- + DocumentParser()
- + ~DocumentParser()
- + getPageAVL(): AVLTree <Page*>
- + getTable(): HashTable
- + getWordAVL(): AVL2
- + checkForWordAVL(string &): bool
- + checkForWordHash(string &): bool
